Claim Objections

Claim 4 is objected to because of the following informalities: The last use of the term "is" makes the claim read inappropriately and should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Free et al.(6,136,878).

Free et al. discloses the preparation of polyurethanes prepared by the reaction of polymethylene polyphenyl isocyanates (PMDI) and polyols in the presence of catalysts, such as triethanolamine which read on the products and processes of applicants' claims (see column 5 lines 30-40, as well as, the entire document). The finished products read on the activators as claimed. The proceedings of the reactive process read on the process of claim 2, as reactants and finished product exist together during synthesis. The finished products as claimed are anticipated as they result from the anticipated

products and processes of claims 1 and 2. Further, Free et al. allows for the presence of other materials in their preparations.
